

Microsoft OneNote

Microsoft OneNote is a powerful electronic note taking tool, deployed as a standard application on all SON managed computers along with Microsoft Office, and also freely downloadable from Microsoft. It is available for all major devices, including Windows, Mac, iOS and Android. Combined with OneDrive, it allows notebooks to be easily shared and synchronized between all of your devices.

A demonstration of OneNote was presented in July 2017 by ITS. Visit the link below to view the recording.

Topics include:

- Learn how Microsoft OneNote can simplify your note taking needs
- Store your OneNote notebooks to OneDrive so your notes automatically sync with all of your devices
- Use Office integration to add documents to your notebooks for viewing off-line or on your laptop, tablet, or phone
- Use secure tabs in OneNote to store sensitive information that is easy to access
- Share notebooks with your teams
